TABLES FOR REGRESSION ANALYSIS IN THE WILMINGTON CASE

JAN DE LEEUW WITH THE ASSISTENCE OF VIVIAN LEW, STAN BENTOW, MATT MCKEEVER

CONTENTS

CONTENTS

1. Armor, improved

The following eight tables show the relationship in 1993 between Race, SES (measured by AFDC and Free Lunch), and the two subtests of IOWA (raw scores) in each of the four districts. For each district we have twelve combinations of the Race and SES variables (three race labels by four SES labels), and for each fo these combinations we count the number of individuals in that combination, the mean test scores of these individuals, and the variance of the test scores of these individuals.

2. ACHILLES, IMPROVED

The following four tables show the relationship in 1993 between Race, SES (measured by AFDC and Free Lunch), and the number of suspensions (actually, the proportion of students in a Race-SES combination that were suspended) in each of the four districts. Suspension here is coded as a binary variable, with code 1 if there was any suspension and 0 if there was none.
